

SwedCOLD is inviting you to the 3<sup>rd</sup> Nordic Dam Safety Seminar **Oktober 14<sup>th</sup> – 15<sup>th</sup>** on

## Current Nordic Issues and Dam Monitoring and Surveillance

In October 2025, dam experts from Iceland, Norway, Sweden and Finland will gather and discuss current Nordic issues related to dams and dam safety in general, as well as monitoring and surveillance in particular. We will meet in the historic town of Falun for a full day seminar, followed by an adventurous evening underground.

The next day we will go for a study tour to the ongoing [rehabilitation project of Forshuvudforsen](#) HPP where the spillway structures are being rebuilt. Our visit will coincide with the concrete works of the second project stage where work are being done behind cofferdams with temporary emergency gates in the event of a flood event while 50 % of total spillway capacity are out of service.

Participants arriving on the 13<sup>th</sup> there will also be offered an opportunity to join a guided tour of the historic Falu Coppermine the evening before.

**Mark the dates in your calendars and stay alert for more information!**
